Key Centres Pave the Way Forward

What's so special about Tobermore Paving? It's never been easier to see for yourself. Three key Paving Centres are now firmly established in Ireland, conveniently located at Tobermore, Bangor and more recently Dublin.

Although a principle factor, improving customer choice was not the only reason behind the development of the new centres. With an ever-expanding range of products and colours, it became critical to give customers the option of viewing the complete range. You can browse through a catalogue. You can imagine the possibilities. But there's only one way to picture the end result.

When it's right in front of your eyes. Innovative landscape displays at each centre allow you to do exactly that. The Tobermore Centre, located at head office, has been in existence for six years. Recognizing the need for an outlet in the Greater Belfast area, a new centre at Bangor was opened in May 1997 situated within the Dickson's Garden Centre complex on the main Bangor to Belfast road. Exactly one year later, Tobermore opened its first Paving Centre in Southern Ireland, located on the main Belfast to Dublin road.

Concrete Advice
Since Tobermore first entered the market place over fifty

years ago, they have built their reputation on quality products and expert advice. Whatever your plans, however complex your designs, you'll find trained staff and practical help at hand with free samples of most products available on request. Landscape Design Advice is also on offer from each of the three centres.

For more information and to view the complete range for yourself, call into your nearest Tobermore Paving Centre. It's a step in the right direction.

Leading Product Rumbled

Designed For Life

Tobermore Tegula is the natural choice for a landscape scheme where aesthetics and style are the primary considerations.

The unique eroded edges and time worn appearance, achieved in the rumbling process, make it the ideal product for conservation schemes.

The ability to harmonise with existing surroundings makes Tegula extremely suitable for domestic applications, pedestrian precincts, and landscaped schemes.

Sizes

The Tegula range is now available in a variety of depths which means it can be used in a large number of applications:-

- 50mm depth - Suitable for domestic drives, paths and patios.
- 60mm depth - Suitable for car parks and lightly trafficked areas, and domestic drives.
- 80mm depth - Suitable for areas subject to heavy or high volume traffic i.e. pedestrian schemes, HGV traffic areas, docks and roadways.

The standard sized Tegula bricks can be used to create attractive stretcher and courtyard patterns. Tegula brick are available in the following sizes:-

- 50mm depth - 175mm x 140mm, 140mm x 140mm, Tegula Setts.
- 60mm depth - 208mm x 173mm, 173mm x 173mm, 115mm x 115mm, Tegula Setts, Circular.
- 80mm depth - 208mm x 173mm, 173mm x 173mm, 115mm x 115mm, 104mm x 173mm, Tegula Setts.

ABOVE Europa Hotel Belfast, one of the many commercial jobs where Tegula has been specified

Tegula Setts, the smaller unit size, allow the creation of bands which break up large expanses of hard landscaping.

Circular and Kerbstone

The classic style of fantail and circular patterns can also open up a whole new world of ideas for the creative designer. Specially shaped blocks allow for the creation of accurate circular patterns and effects.

To complement the block paving, the range also includes a versatile Kerbstone, which can be used to retain paving or build steps.

Colours

Four main colours are readily available which allow the designer total freedom and flexibility to match or add character to an existing environment.

COLOURS AVAILABLE

Matoro makes light work of heavy duty

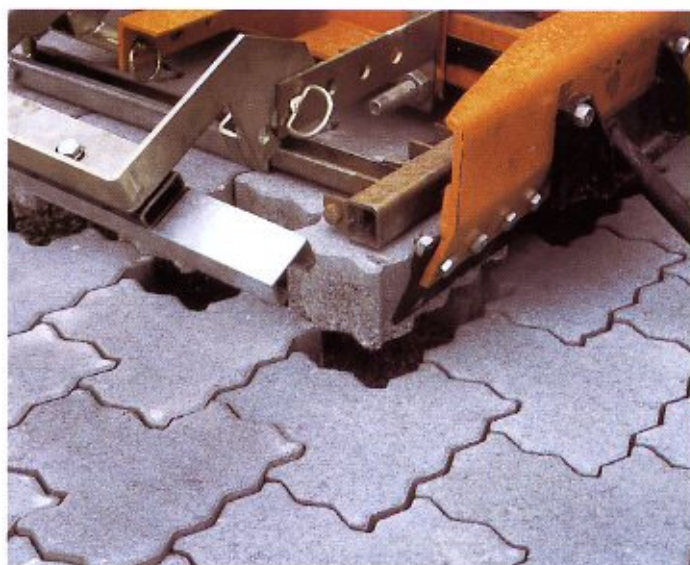

It's strong, it's functional and you can't put a foot wrong with it. The Matoro heavy duty paving system is the latest product to get off the ground at Tobermore. Its unique interlocking capabilities on all four sides ensure each block lies in a secure position, therefore preventing individual twisting and tilting of single stones and signs of disintegration within the pavement. It's also extremely user friendly. Even if the installer tried, he has no option but to lay it correctly. Its clever design, free from additional aids, makes certain of that.

Grounds for Improvement

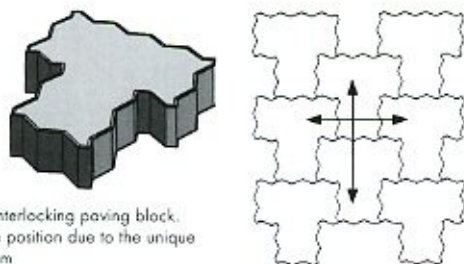

Any trafficked area with heavy loads will benefit from this unique paving system.

The design ensures an even distribution of the load to the base of the block, reducing flexional tensile stress and guaranteeing a heavier load bearing capacity. Each installation unit can consist of either 21 or 25 stones and only consists of full size stones. Identical joints in the bricks make it impossible to identify a single unit within the pavement.

A welcome addition to the Tobermore range.

THE NEW ENVIRONMENTALLY FRIENDLY SELF DRAINING SYSTEM

Rima Goes for Green

Green paving stones!
Whatever will Tobermore think of next?

Rima, soon to be introduced to the Tobermore range, is the new ecological paving stone system. The brick's unique spacer design helps reduce or indeed eliminate stormwater

runoff which in turn decreases flooding and relieves sewer systems. Water infiltration is enhanced therefore improving the regeneration of ground water. Kind to the environment yet tough enough to provide a sturdy pavement for vehicular traffic - it's no wonder Rima has got the green light.

ABOVE LEFT Rima should be installed with spacers intertwined with the neighbouring block for water drainage
ABOVE RIGHT Rima should be installed with spacers touching to achieve larger joints for joint growth

ABOVE The new Rima block which allows drainage or grass growth

Cream of the Crop

As its name suggests, Tobermore Flaxstone is a light cream flaxen coloured paving. However, by no means is it pale in comparison to the other products in the Tobermore range. Available in a range of sizes and finishes, architects can enjoy total freedom to create numerous patterns and designs.

In a field of its own

Unique to Tobermore, the product's light natural colour will brighten up the darkest of surroundings without detracting from the area's character. In a choice of rumbled, smooth or textured

finish, there's a look to compliment any environment.

Reap the benefits

Produced from natural aggregates, Flaxstone is perfectly suited to modern landscape environments and conservation projects.

The fruits of the labour

See the finished result for yourself. Tobermore have supplied Flaxstone to Antrim Town Centre, Portglenone Marina, Housing Scheme at Seven Oaks, Londonderry; and to a large environmental improvement scheme at Fountain Street in the heart of Belfast.

Colours that Complement

SAMPLES For an exact colour match, we recommend you refer to samples. As with all concrete products, slight colour and efflorescence may mask the colour for a period of time

Gone are the days when paving bricks were only available in a handful of colours.

Today's customer demands a more varied and aesthetically pleasing choice. As a modern and innovative company, Tobermore has moved with the times, now offering an extensive choice of colours to complement any surroundings.

Take the Pedesta 60mm paving brick, this old favourite now comes in eight different colours - **Red, Golden, Natural, Brindle, Heather, Charcoal, Chocolate and Bracken.** It's just one example of the many products enjoying a face lift in the Tobermore range. Samples are available from our Paving Centres in Tobermore, Bangor, and Dublin.
