

the benefits of block paving

The benefits of block paving can be measured through a variety of elements. It has the versatility to meet project challenges head-on and can easily handle heavy-duty applications, detailed streetscape designs and sympathetic conservation schemes. In addition, advantages include excellent physical performance, pleasing aesthetic appearance, reconstitution abilities and overall life-long cost-effectiveness.

flexible and hard wearing

Due to its flexible and hard wearing performance, block paving is now commonly used in major projects such as docks, airports and heavy industrial sites. Unaffected by frost, salts, oils and most chemicals, with a potential lifespan substantially greater than conventional surfaces, it provides a high return on investment.

interlocking capacity

Its unique interlocking capacity ensures even dispersion of weight, both sideways and downwards, even under heavy loads. It can also adapt to a variation in the underlying material without any loss of integrity.

adaptable to any project

Block paving can be used for any scheme. It has the strength and durability to handle major loads as found in heavy industrial sites and has the colours and style to meet the needs of any environmental improvement scheme. The range of colours, size, thickness and finishes ensure that block paving is a product with enough versatility to meet the requirements of any plan.

accessibility/reinstatement

The versatility of block paving increases with the ability to gain easy access to underlying systems for essential maintenance work. The area can be accessed at any stage, and the blocks which are removed can be reused to repair the area after work has been carried out.

long life costings

Block paving offers cost-effective solutions to numerous long-term problems in comparison to other surfacing products. These include easy access, low maintenance, long life span and re-usability, making it a premier option for specifiers.

non slip-surface

Excellent skid resistant and non-slip surfaces make block paving a favourite for trafficked and pedestrian areas of all types.

appearance

Excellent appearance and performance guarantee a long term investment. Use of the product will increase the perceived value of the area, as well as providing an aesthetically pleasing finish.

efficient installation

Block paving is now manufactured to ensure easy and efficient installation. Machines can be deployed to install paving in a cost effective manner, with the added advantage of operating in most weather conditions. Once complete, the block paving is traffic ready.

reduced waste

Wastage is reduced as block paving allows precise quantities to be ordered to accurate measurements.
