Pietra Granite Flags are the perfect choice for contemporary or traditional buildings. They are available in four distinct colours to suit a diversity of applications and the depth and vibrancy of their texture gives a strong visual appearance.

Pietra Granite Flags are available in both sawn edges or fettle edges providing further opportunity to enhance or reinstate the natural character of any scheme.

Pietra Quartzite is a hard-wearing stone with a fascinating combination of colour and sparkle. The colour comes from the iron rich minerals while the sparkle is created by the crystals of pure quartz.

Hand dressed finish

The Platinum Granite Flag is supplied in a hand dressed finish. This finish leaves the product in its natural state providing the unique aesthetic appeal that is widely required from natural stone products.

Flamed textured & sawn

All other Pietra Granite Flags have a flame textured surface and is ideal for the external approaches to buildings which receive substantial pedestrian traffic.

Complementary kerbs	Pietra Granite Kerbs

Tobermore operate an Integrated Management System and is an accredited ISO9001:2000 and ISO14001:2004 company.

Important information for Pietra Granite and Quartzite Flags

All natural stone products are porous and are subject to variation in colour, density, dimension and quantity. These inherent variations cannot be controlled nor the precise shade of the stone guaranteed. Tobermore's selection process ensures your natural stone products are as uniform in size and thickness as possible. Because these are natural materials, the size and thickness may vary.

This can normally be allowed for when they are installed. Consult with an experienced laying contractor before installing these products. Please note that sealing the granite flags can help reduce staining from coffee, wine and efflorescence. Tobermore have sealing products available if required. Contact your local sales office for further information.

The flame textured finish accentuates the crystalline nature of the natural stone and at the same time gives good slip resistance. The square, sawn edges allow the slabs to be closely butt jointed. When laying these slabs you should ensure that the textured surface is up.
