Pietra Granite Step Units allow you to create steps and ramps of any width or height. The steps have a bullnosed edge which softens the look and feel of this very hardwearing stone.

Clever use of the curved corners and variations in levels can add a touch of elegance to any doorway.

Examples A-D demonstrate 4 typical step designs which can be created from the step units available. Many other combinations are possible to suit individual requirements.

Also refer to the Important Information for Pietra Granite on page 87.
