The Challenge

Block paving was required to meet both SUDs requirements and aesthetic aspiration.

The IKEA store was constructed adjacent to the famous Tinsley Viaduct on the outskirts of Sheffield, bringing the popular retail destination to the area near the Meadowhill Shopping Centre.

A crucial part of the £60M project was that the hard landscaping design would satisfy SUDs requirements but maintain a high-end aesthetic appeal that would reflect the IKEA brand.

The Solution

Tobermore Hydropave products provided suitable drainage for the project.

The hard landscaping solution created an outdoor area that effectively promoted the IKEA brand. By utilising high-end block paving product Fusion in the cool tones of silver, mid grey, and graphite, the elevated finish was beautifully realised. Permeable paving was employed in certain areas to support drainage that would meet SUDs requirements for the site, exemplifying the project's green credentials. This in turn made it one of IKEA's most sustainable stores.

Tobermore's Granite Step Units with Contrasting Nosing allow for the uneven terrain to be navigated elegantly with appealing steps that augment the customer experience at the IKEA store. Hazard Warning flags also ensure that the site fully meets modern accessibility standards for people with impaired vision.

Laying patterns and delineation enhanced the area to meet customer expectations, creating spacious parking bays and attractive pedestrianised walkways. Hydropave Pedesta and Fusion paving combined to realise a project that radiates a unique, high-quality feel.
