Client

SJ Roberts Construction Ltd

The Challenge

Aesthetically pleasing paving options were required to establish a welcoming entrance to the Telford community hub.

Following the deterioration of the Sugar Beet Factory that once stood on the site, the vision for Allscott Meads was to create a modern school in a beautiful setting, that would become a hub at the heart of the community. To reach a wide demographic, creating an inviting space was imperative and the use of warm tones were requested for the paving. A retaining wall solution for a small area to one side of the building was necessary to optimise space for parking in a manner that would elevate aesthetic appeal.

The Solution

Hydropave Tegula Cedar and Bracken were used to compliment the modern building.

To create a space where students could flourish and thrive, it was important for the area to feel modern but welcoming. Hydropave Tegula 240 and Hydropave Tegula Duo Block Paving in the homely colours of Cedar and Bracken were ideal products to realise a traditional, warm feel. To reduce flooding and remove harmful pollutants, a sustainable drainage system was implemented through use of Tobermore's Hydropave products. All walkways and car parking areas were paved, with delineation added so that specific areas were clearly visible. Secura Grand facilitated a seamless, tiered retaining wall solution that enabled additional parking to be added to the grounds, simultaneously increasing aesthetic appeal.
