## The Challenge

Creating a cohesive, durable, and visually appealing environment.

Rossharbour Resort needed a paving solution that balanced durability with aesthetics across both new and existing areas. The patio spaces required a modern, easy-to-maintain surface suitable for high levels of foot traffic, while the pathways needed to tie in seamlessly with existing paving. All elements had to reflect the high-end feel of the resort and withstand daily wear without compromising on visual impact - making product choice and design cohesion essential to the project's success.

## The Solution

Tailored product recommendations and expert on-site support.

To deliver on these requirements, Tobermore provided a mix of modern and traditional paving solutions. A Tobermore representative carried out a site visit to assess the resort's needs and offer expert guidance. Samples were supplied during this consultation to ensure the client was happy with the proposed finishes.

Stanza slabs were used for the patio areas, chosen for their smooth, contemporary design, ease of maintenance, and suitability for hospitality environments. Tegula Slate was laid on the pathways to create continuity between new and existing areas, offering a classic look with robust performance.

For added character, Historic Circles and Sienna Setts were incorporated into the design - breaking up large paved areas and adding distinctive visual interest.

With thoughtful product selection, tailored advice, and a smooth installation process, the final result elevated the outdoor spaces to match the resort's premium experience.

I was tasked with completing the paving for Rossharbour Resort's new lodges and reached out to Jonathan at Tobermore to discuss the best products for the job and obtain samples.

Having previously used Tobermore products at the resort and throughout my years in paving, I know they're both easy to lay and highly durable. Stanza was the perfect choice for this project - it offers a sleek finish, is easy to maintain, and the ability to grout it made it an ideal solution for the job.
